

ELEVATE! RISK ADJUSTMENT INSIGHTS

DELIVERS BEST-IN-CLASS CLINICALLY-DERIVED ANALYTICS

Advantmed's ELEVATE! Risk Adjustment Insights clinically-derived analytics engine combines advanced suspecting and targeting, probability trend analysis and coding gap intervention to provide health plans and provider groups with a comprehensive risk adjustment solution.

COMPREHENSIVE AND ACCURATE SUSPECTING

Advantmed's clinical mapping reduces false positives during suspecting due to the mapping of acute versus chronic conditions at the ICD-10 level, more accurately reflecting chronic conditions. Detailed and specific clinical mapping improve opportunities for more comprehensive and accurate results.

Advantmed captures data from multiple sources to identify chronic conditions needing intervention. Data sources include:

Screenings

Physician Record Reviews

Claims

Pharmacy

Laboratory

Member Data

Provider Data

CMS Files

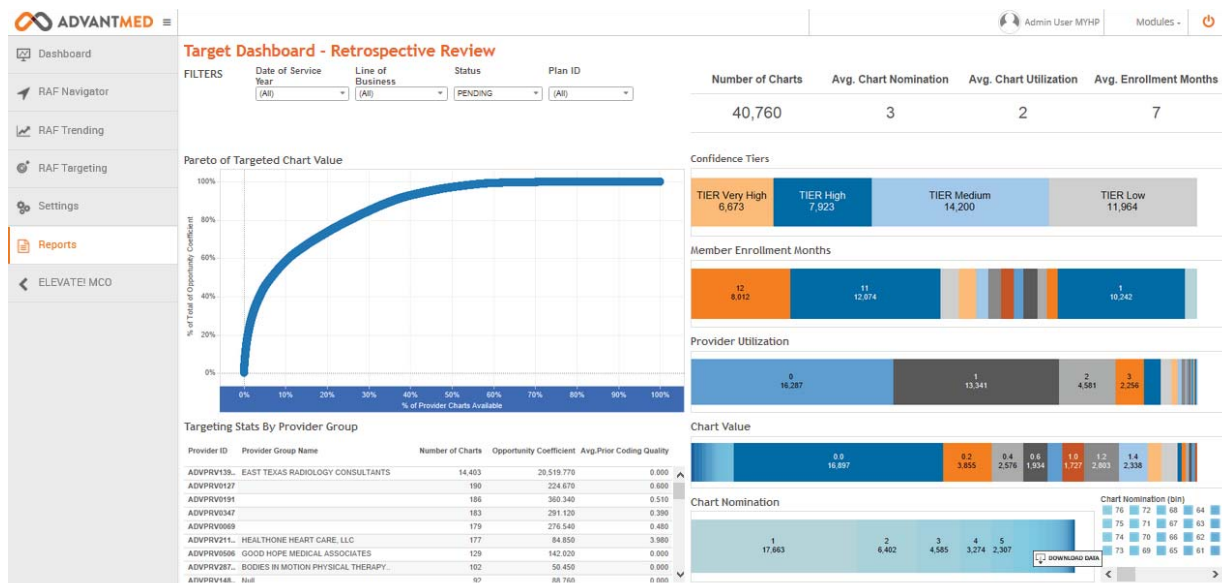

Supplemental Data

Member Records/EMR

INTELLIGENT AND AGILE TARGETING

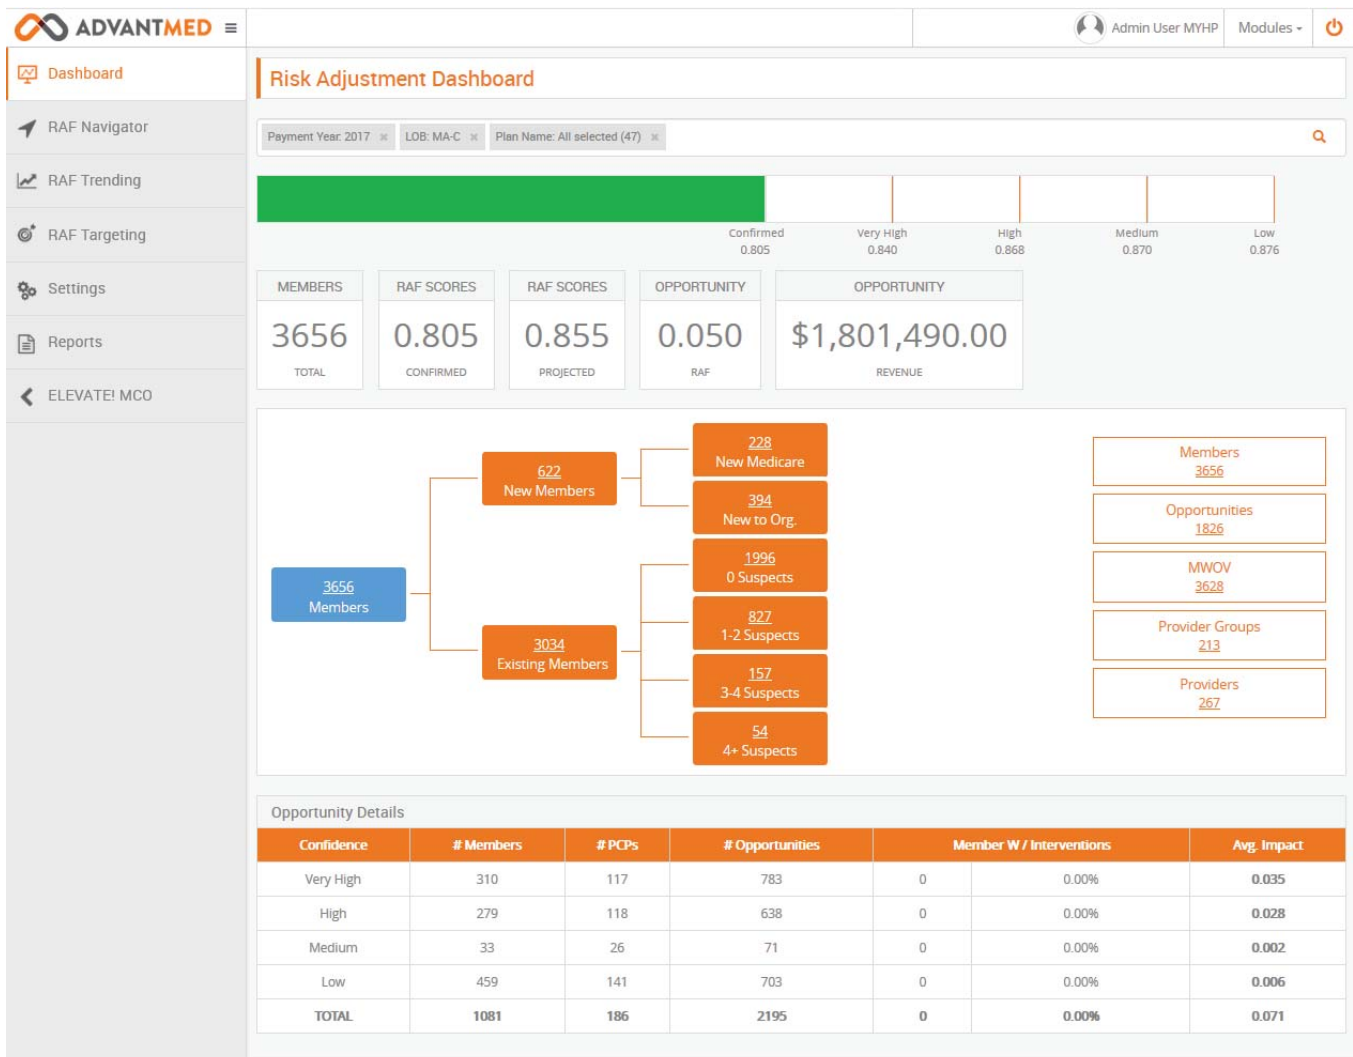

This sophisticated targeting leverages intelligent chart scoring, utilization targeting, member visits and member medical expense. A proprietary analytic engine cleans, maps and validates data for importing into the Advantmed data warehouse. Each identified suspect is assigned a level of confidence from very high to low. These confidence levels help to inform the appropriate intervention.

ELEVATE! Risk Adjustment Insights calculates historical and potential risk scores and then determines suspected morbidities leading to both revenue improvement and cost containment prospects. The solution also interprets risk score trends to outline a client-specific risk adjustment strategy with interventions tailored to each health plan's unique needs.

DASHBOARDS & REPORTING

Real-time access and visibility provide clients with the underlying drivers of medical and financial risk. Advantmed clients improve payment accuracy, address population health necessities, and rationalize the cost of care provided.

This agile solution allows clients to analyze risk scores based upon specific Hierarchical Condition Categories (HCCs) as defined by CMS for Medicare, ACA and state-based Medicaid models. ELEVATE! Risk Adjustment Insights delivers actionable data and reporting that enables Advantmed clients to make informed strategic decisions.
